

Brierley Forest Primary and Nursery School

Power Maths White Rose Edition calculation policy, UPPER KS2

KEY STAGE 2

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

Key language: decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage.

Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods.

Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen.

Multiplication and division: Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.

Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.

Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.

Multiplication and division of decimals are also introduced and refined in Year 6.

Fractions: Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them.

Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic.

Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.

Year 5			
	Concrete	Pictorial	Abstract
Year 5 Addition			
Column addition with whole numbers	Use place value equipment to represent additions.  <i>Add a row of counters onto the place value grid to show $15,735 + 4,012$</i>	Represent additions, using place value equipment on a place value grid alongside written methods.  <i>I need to exchange 10 tens for a 100.</i> 	Use column addition, including exchanges. 
Representing additions		Bar models represent addition of two or more numbers in the context of problem solving. 	Use approximation to check whether answers are reasonable.  <i>I will use $23,000 + 8,000$ to check.</i>

		Jen £2,600 Holly £2,600 £1,450 £4,050 <table><tr><td></td><td>Th</td><td>H</td><td>T</td><td>O</td></tr><tr><td></td><td>2</td><td>6</td><td>0</td><td>0</td></tr><tr><td>+</td><td>1</td><td>4</td><td>5</td><td>0</td></tr><tr><td></td><td>4</td><td>0</td><td>5</td><td>0</td></tr><tr><td></td><td></td><td></td><td></td><td></td></tr></table><table><tr><td></td><td>Th</td><td>H</td><td>T</td><td>O</td></tr><tr><td></td><td>2</td><td>6</td><td>0</td><td>0</td></tr><tr><td>+</td><td>4</td><td>0</td><td>5</td><td>0</td></tr><tr><td></td><td>6</td><td>6</td><td>5</td><td>0</td></tr><tr><td></td><td></td><td></td><td></td><td></td></tr></table>		Th	H	T	O		2	6	0	0	+	1	4	5	0		4	0	5	0							Th	H	T	O		2	6	0	0	+	4	0	5	0		6	6	5	0

Adding tenths	Link measure with addition of decimals. Two lengths of fencing are 0.6 m and 0.2 m. How long are they when added together? 0.6 m 0.2 m	Use a bar model with a number line to add tenths. 0.6 m 0.2 m 0.6 + 0.2 = 0.8 6 tenths + 2 tenths = 8 tenths	Understand the link with adding fractions. $\frac{6}{10} + \frac{2}{10} = \frac{8}{10}$ 6 tenths + 2 tenths = 8 tenths 0.6 + 0.2 = 0.8																																																		
Adding decimals using column addition	Use place value equipment to represent additions. Show 0.23 + 0.45 using place value counters.	Use place value equipment on a place value grid to represent additions. Represent exchange where necessary.	Add using a column method, ensuring that children understand the link with place value. <table><tr><td>O</td><td>·</td><td>Tth</td><td>Hth</td></tr><tr><td>0</td><td>·</td><td>2</td><td>3</td></tr><tr><td>+</td><td>0</td><td>·</td><td>4</td><td>5</td></tr><tr><td></td><td>0</td><td>·</td><td>6</td><td>8</td></tr></table> Include exchange where required, alongside an understanding of place value. Checking strategies and representing subtractions

Bar models represent subtractions in problem contexts, including 'find the difference'.

Children can explain the mistake made when the columns have not been ordered correctly.

Use approximation to check calculations.

Bella's working

Year 5 Multiplication																																																			
Understanding factors	Use cubes or counters to explore the meaning of 'square numbers'. <i>25 is a square number because it is made from 5 rows of 5.</i>  Use cubes to explore cube numbers.	Use images to explore examples and non-examples of square numbers.  $8 \times 8 = 64$ $8^2 = 64$	Understand the pattern of square numbers in the multiplication tables. <i>Use a multiplication grid to circle each square number. Can children spot a pattern?</i>																																																

	 8 is a cube number.	 12 is not a square number, because you cannot multiply a whole number by itself to make 12.													
Multiplying by 10, 100 and 1,000	Use place value equipment to multiply by 10, 100 and 1,000 by unitising. <table border="1" data-bbox="351 708 916 884"><tr><td>$4 \times 1 = 4 \text{ ones} = 4$</td><td></td></tr><tr><td>$4 \times 10 = 4 \text{ tens} = 40$</td><td></td></tr><tr><td>$4 \times 100 = 4 \text{ hundreds} = 400$</td><td></td></tr></table>	$4 \times 1 = 4 \text{ ones} = 4$		$4 \times 10 = 4 \text{ tens} = 40$		$4 \times 100 = 4 \text{ hundreds} = 400$		Understand the effect of repeated multiplication by 10.  $7 \times 10 = 70$ $7 \times 100 = 7,000$ $7 \times 1,000 = 70,000$	Understand how exchange relates to the digits when multiplying by 10, 100 and 1,000. <table border="1" data-bbox="1554 732 1935 868"><tr><th>H</th><th>T</th><th>O</th></tr><tr><td></td><td>I</td><td>7</td></tr></table> $17 \times 10 = 170$ $17 \times 100 = 17 \times 10 \times 10 = 1,700$ $17 \times 1,000 = 17 \times 10 \times 10 \times 10 = 17,000$	H	T	O		I	7
$4 \times 1 = 4 \text{ ones} = 4$															
$4 \times 10 = 4 \text{ tens} = 40$															
$4 \times 100 = 4 \text{ hundreds} = 400$															
H	T	O													
	I	7													
Multiplying by multiples of 10, 100 and 1,000	Use place value equipment to explore multiplying by unitising. 	Use place value equipment to represent how to multiply by multiples of 10, 100 and 1,000.	Use known facts and unitising to multiply. $5 \times 4 = 20$ $5 \times 40 = 200$ $5 \times 400 = 2,000$ $5 \times 4,000 = 20,000$												

	5 groups of 3 ones is 15 ones. 5 groups of 3 tens is 15 tens. So, I know that 5 groups of 3 thousands would be 15 thousands.	 $4 \times 3 = 12$ $4 \times 300 = 1,200$ $6 \times 4 = 24$ $6 \times 400 = 2,400$	$5,000 \times 4 = 20,000$																										
Multiplying up to 4-digit numbers by a single digit	Explore how to use partitioning to multiply efficiently. $8 \times 17 = ?$  $8 \times 10 = 80$  $8 \times 7 = 56$ $80 + 56 = 136$ So, $8 \times 17 = 136$	Represent multiplications using place value equipment and add the 1s, then 10s, then 100s, then 1,000s. <table><thead><tr><th>H</th><th>T</th><th>O</th></tr></thead><tbody><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr></tbody></table>	H	T	O																Use an area model and then add the parts. <table><thead><tr><th></th><th>100</th><th>60</th><th>3</th></tr></thead><tbody><tr><td>5</td><td>$100 \times 5 = 500$</td><td>$60 \times 5 = 300$</td><td>$3 \times 5 = 15$</td></tr></tbody></table> Use a column multiplication, including any required exchanges. $\begin{array}{r} 136 \\ \times 5 \\ \hline 816 \\ 23 \end{array}$		100	60	3	5	$100 \times 5 = 500$	$60 \times 5 = 300$	$3 \times 5 = 15$
H	T	O																											
																													
																													
																													
																													
																													
	100	60	3																										
5	$100 \times 5 = 500$	$60 \times 5 = 300$	$3 \times 5 = 15$																										
Multiplying 2-digit numbers by 2-digit numbers	Partition one number into 10s and 1s, then add the parts. $23 \times 15 = ?$	Use an area model and add the parts. $28 \times 15 = ?$	Use column multiplication, ensuring understanding of place value at each stage.																										

	 10 × 15 = 150  3 × 15 = 45 There are 345 bottles of milk in total. 23 × 15 = 345  10 × 15 = 150 <table><tr><td>H</td><td>T</td><td>O</td></tr><tr><td>1</td><td>5</td><td>0</td></tr><tr><td>1</td><td>5</td><td>0</td></tr><tr><td>+</td><td>4</td><td>5</td></tr><tr><td>3</td><td>4</td><td>5</td></tr></table>	H	T	O	1	5	0	1	5	0	+	4	5	3	4	5	<table><tr><td></td><td>20 m</td><td>8 m</td></tr><tr><td>10 m</td><td>20 × 10 = 200 m²</td><td>8 × 10 = 80 m²</td></tr><tr><td>5 m</td><td>20 × 5 = 100 m²</td><td>8 × 5 = 40 m²</td></tr></table> 28 × 15 = 420 <table><tr><td>H</td><td>T</td><td>O</td></tr><tr><td>2</td><td>0</td><td>0</td></tr><tr><td>1</td><td>0</td><td>0</td></tr><tr><td></td><td>8</td><td>0</td></tr><tr><td>+</td><td>4</td><td>0</td></tr><tr><td>4</td><td>2</td><td>0</td></tr></table>		20 m	8 m	10 m	20 × 10 = 200 m ²	8 × 10 = 80 m ²	5 m	20 × 5 = 100 m ²	8 × 5 = 40 m ²	H	T	O	2	0	0	1	0	0		8	0	+	4	0	4	2	0	3 4 × 2 7 2 3 8 34 × 7 6 8 0 34 × 20 9 1 8 34 × 27 3 4 × 2 7 2 3 8 34 × 7 6 8 0 34 × 20 9 1 8 34 × 27

			$\begin{array}{r} 1\ 2\ 7\ 4 \\ \times \quad 3\ 2 \\ \hline 2\ 5\ 4\ 8 \end{array} \quad 1,274 \times 2$ Then multiply 1,274 by 30. $\begin{array}{r} 1\ 2\ 7\ 4 \\ \times \quad 3\ 2 \\ \hline 2\ 5\ 4\ 8 \quad 1,274 \times 2 \\ 3\ 8\ 2\ 2\ 0 \quad 1,274 \times 30 \\ \hline \end{array}$ Finally, find the total. $\begin{array}{r} 1\ 2\ 7\ 4 \\ \times \quad 3\ 2 \\ \hline 2\ 5\ 4\ 8 \quad 1,274 \times 2 \\ 3\ 8\ 2\ 2\ 0 \quad 1,274 \times 30 \\ \hline 4\ 0\ 7\ 6\ 8 \end{array}$ $1,274 \times 32 = 40,768$
Multiplying decimals by 10, 100 and 1,000	Use place value equipment to explore and understand the exchange of 10 tenths, 10 hundredths or 10 thousandths.	Represent multiplication by 10 as exchange on a place value grid.  $0.14 \times 10 = 1.4$	Understand how this exchange is represented on a place value chart.  $2.5 \times 10 = 25$ $2.5 \times 100 = 250$ $2.5 \times 1,000 = 2,500$
Year 5 Division			

Understanding factors and prime numbers	Use equipment to explore the factors of a given number.  $24 \div 3 = 8$ $24 \div 8 = 3$ <i>8 and 3 are factors of 24 because they divide 24 exactly.</i> $24 \div 5 = 4$ remainder 4.  <i>5 is not a factor of 24 because there is a remainder.</i>	Understand that prime numbers are numbers with exactly two factors. $13 \div 1 = 13$ $13 \div 2 = 6 \text{ r } 1$ $13 \div 4 = 4 \text{ r } 1$  <i>1 and 13 are the only factors of 13. 13 is a prime number.</i>	Understand how to recognise prime and composite numbers. <i>I know that 31 is a prime number because it can be divided by only 1 and itself without leaving a remainder.</i> <i>I know that 33 is not a prime number as it can be divided by 1, 3, 11 and 33.</i> <i>I know that 1 is not a prime number, as it has only 1 factor.</i>
Understanding inverse operations and the link with multiplication, grouping and sharing	Use equipment to group and share and to explore the calculations that are present. <i>I have 28 counters.</i> <i>I made 7 groups of 4. There are 28 in total.</i> <i>I have 28 in total. I shared them equally into 7 groups. There are 4 in each group.</i> <i>I have 28 in total. I made groups of 4. There are 7 equal groups.</i>	Represent multiplicative relationships and explore the families of division facts.  $60 \div 4 = 15$ $60 \div 15 = 4$	Represent the different multiplicative relationships to solve problems requiring inverse operations. $12 \div 3 = \square$ $12 \div \square = 3$ $\square \times 3 = 12$ $\square \div 3 = 12$  Understand missing number problems for division calculations and know how to solve them using inverse operations. $22 \div ? = 2$ $22 \div 2 = ?$

			$? \div 2 = 22$ $? \div 22 = 2$								
Dividing whole numbers by 10, 100 and 1,000	Use place value equipment to support unitising for division. $4,000 \div 1,000$  $4,000$ is 4 thousands. $4 \times 1,000 = 4,000$ So, $4,000 \div 1,000 = 4$	Use a bar model to support dividing by unitising. $380 \div 10 = 38$  380 is 38 tens. $38 \times 10 = 380$ $10 \times 38 = 380$ So, $380 \div 10 = 38$	Understand how and why the digits change on a place value grid when dividing by 10, 100 or 1,000. <table border="1" data-bbox="1563 416 2123 515"> <thead> <tr> <th>Th</th><th>H</th><th>T</th><th>O</th></tr> </thead> <tbody> <tr> <td>3</td><td>2</td><td>0</td><td>0</td></tr> </tbody> </table> $3,200 \div 100 = ?$ $3,200$ is 3 thousands and 2 hundreds. $200 \div 100 = 2$ $3,000 \div 100 = 30$ $3,200 \div 100 = 32$ So, the digits will move two places to the right.	Th	H	T	O	3	2	0	0
Th	H	T	O								
3	2	0	0								
Dividing by multiples of 10, 100 and 1,000	Use place value equipment to represent known facts and unitising.  15 ones put into groups of 3 ones. There are 5 groups. $15 \div 3 = 5$ 15 tens put into groups of 3 tens. There are 5 groups.	Represent related facts with place value equipment when dividing by unitising.  180 is 18 tens. 18 tens divided into groups of 3 tens. There are 6 groups.	Reason from known facts, based on understanding of unitising. Use knowledge of the inverse relationship to check. $3,000 \div 5 = 600$ $3,000 \div 50 = 60$ $3,000 \div 500 = 6$ $5 \times 600 = 3,000$ $50 \times 60 = 3,000$ $500 \times 6 = 3,000$								

	$150 \div 30 = 5$	$180 \div 30 = 6$ 12 ones divided into groups of 4. There are 3 groups. 12 hundreds divided into groups of 4 hundreds. There are 3 groups. $1200 \div 400 = 3$	
Dividing up to four digits by a single digit using short division	Explore grouping using place value equipment. $268 \div 2 = ?$ <i>There is 1 group of 2 hundreds.</i> <i>There are 3 groups of 2 tens.</i> <i>There are 4 groups of 2 ones.</i> $264 \div 2 = 134$	Use place value equipment on a place value grid alongside short division. The model uses grouping. A sharing model can also be used, although the model would need adapting. Lay out the problem as a short division.	Use short division for up to 4-digit numbers divided by a single digit. $\begin{array}{r} 0 \ 5 \ 5 \ 6 \\ 7 \overline{) 3 \ 8 \ 9 \ 2} \end{array}$ $3,892 \div 7 = 556$ Use multiplication to check. $556 \times 7 = ?$ $6 \times 7 = 42$ $50 \times 7 = 350$ $500 \times 7 = 3500$ $3,500 + 350 + 42 = 3,892$

There is 1 group of 4 in 4 tens.
There are 2 groups of 4 in 8 ones.

Work with divisions that require exchange.

First, lay out the problem.

How many groups of 4 go into 9 tens?

2 groups of 4 tens with 1 ten left over.

Exchange the 1 ten left over for 10 ones.

We now have 12 ones.

How many groups of 4 go into 12 ones?

3 groups of 4 ones.

Understanding remainders

Understand remainders using concrete versions of a problem.

80 cakes divided into trays of 6.

80 cakes in total. They make 13 groups of 6, with 2 remaining.

Use short division and understand remainders as the last remaining 1s.

Lay out the problem as short division.

How many groups of 6 go into 8 tens?

There is 1 group of 6 tens.

There are 2 tens remaining.

How many groups of 6 go into 20 ones?

There are 3 groups of 6 ones.

There are 2 ones remaining.

In problem solving contexts, represent divisions including remainders with a bar model.

$$683 = 136 \times 5 + 3$$

$$683 \div 5 = 136 \text{ r } 3$$

Dividing decimals by 10, 100 and 1,000	Understand division by 10 using exchange. <i>2 ones are 20 tenths.</i> <i>20 tenths divided by 10 is 2 tenths.</i>	Represent division using exchange on a place value grid.  <i>1.5 is 1 one and 5 tenths.</i> <i>This is equivalent to 10 tenths and 50 hundredths.</i> <i>10 tenths divided by 10 is 1 tenth.</i> <i>50 hundredths divided by 10 is 5 hundredths.</i> <i>1.5 divided by 10 is 1 tenth and 5 hundredths.</i> $1.5 \div 10 = 0.15$	Understand the movement of digits on a place value grid.  $0.85 \div 10 = 0.085$ $8.5 \div 100 = 0.085$
Understanding the relationship between fractions and division	Use sharing to explore the link between fractions and division. <i>1 whole shared between 3 people.</i> <i>Each person receives one-third.</i>	Use a bar model and other fraction representations to show the link between fractions and division.	Use the link between division and fractions to calculate divisions. $5 \div 4 = \frac{5}{4} = 1\frac{1}{4}$ $11 \div 4 = \frac{11}{4} = 2\frac{3}{4}$

	   	 $1 \div 3 = \frac{1}{3}$

Selecting mental methods for larger numbers where appropriate	Represent 7-digit numbers on a place value grid and use this to support thinking and mental methods.  $2,411,301 + 500,000 = ?$ <i>This would be 5 more counters in the HTh place.</i> <i>So, the total is 2,911,301.</i> $2,411,301 + 500,000 = 2,911,301$	Use a bar model to support thinking in addition problems. $257,000 + 99,000 = ?$  <i>I added 100 thousands then subtracted 1 thousand.</i> $257 \text{ thousands} + 100 \text{ thousands} = 357 \text{ thousands}$ $257,000 + 100,000 = 357,000$ $357,000 - 1,000 = 356,000$ <i>So, $257,000 + 99,000 = 356,000$</i>	Use place value and unitising to support mental calculations with larger numbers. $195,000 + 6,000 = ?$ $195 + 5 + 1 = 201$ <i>195 thousands + 6 thousands = 201 thousands</i> <i>So, $195,000 + 6,000 = 201,000$</i>
Understanding order of operations in calculations	Use equipment to model different interpretations of a calculation with more than one operation. Explore different results. $3 \times 5 - 2 = ?$  $3 \times 5 - 2$ $\downarrow \quad \downarrow$ $3 \times 3 = 9$ $3 \times 5 - 2$ $\downarrow \quad \downarrow$ $15 - 2 = 13$	Model calculations using a bar model to demonstrate the correct order of operations in multi-step calculations.  This can be written as: $16 \times 4 + 16 \times 6$ $64 + 96 = 160$	Understand the correct order of operations in calculations without brackets. Understand how brackets affect the order of operations in a calculation. $4 + 6 \times 16$ $4 + 96 = 100$ $(4 + 6) \times 16$ $10 \times 16 = 160$

Year 6 Subtraction																																																																											
Comparing and selecting efficient methods	Use counters on a place value grid to represent subtractions of larger numbers. <table><tr><th>Th</th><th>H</th><th>T</th><th>O</th></tr><tr><td></td><td></td><td></td><td></td></tr></table>	Th	H	T	O					Compare subtraction methods alongside place value representations. 2,679 ? 534 <table><tr><th></th><th>Th</th><th>H</th><th>T</th><th>O</th></tr><tr><td></td><td>2</td><td>6</td><td>7</td><td>9</td></tr><tr><td>-</td><td></td><td>5</td><td>3</td><td>4</td></tr><tr><td></td><td>2</td><td>1</td><td>4</td><td>5</td></tr></table> <table><tr><th>Th</th><th>H</th><th>T</th><th>O</th></tr><tr><td></td><td></td><td></td><td></td></tr></table>		Th	H	T	O		2	6	7	9	-		5	3	4		2	1	4	5	Th	H	T	O					Compare and select methods. Subtracting mentally with larger numbers		Use a bar model to show how unitising can support mental calculations. $950,000 - 150,000$ That is 950 thousands – 150 thousands  So, the difference is 800 thousands. $950,000 - 150,000 = 800,000$	Subtract efficiently from powers of 10. $10,000 - 500 = ?$
Year 6 Multiplication			
Multiplying up to a 4-digit number by a single digit number	Use equipment to explore multiplications.  4 groups of 2,345 This is a multiplication: $4 \times 2,345$ $2,345 \times 4$	Use place value equipment to compare methods. Method 1  Method 2 	Understand area model and short multiplication. Compare and select appropriate methods for specific multiplications. Method 3  $12,000 + 800 + 80 + 20 = 12,900$ Method 4 
Multiplying up to a 4-digit		Use an area model alongside written multiplication.	Use compact column multiplication with understanding of place value at all stages.

number by a 2-digit number		200 30 5 20 4,000 600 100 1 200 30 5 4,200 + 630 + 105 = 4,935 2 3 5 x 5 3 0 2 0 0 1 0 0 6 0 0 4 0 0 0 4 9 3 5 1 × 5 1 × 30 1 × 200 20 × 5 20 × 30 20 × 300 21 × 235	2 3 5 x 5 7 0 4 9 3 5 1 × 235 20 × 235 21 × 235
Using knowledge of factors and partitions to compare methods for multiplications	Use equipment to understand square numbers and cube numbers. </		

		Represent and compare methods using a bar model.	$= 3 \times 8 \times 2 \times 5$ $= 24 \times 10$ $= 240$
Multiplying by 10, 100 and 1,000	Use place value equipment to explore exchange in decimal multiplication. Represent 0.3. Multiply by 10. Exchange each group of ten tenths. $0.3 \times 10 = ?$ 0.3 is 3 tenths. 10×3 tenths are 30 tenths. 30 tenths are equivalent to 3 ones.	Understand how the exchange affects decimal numbers on a place value grid. $0.3 \times 10 = 3$	Use knowledge of multiplying by 10, 100 and 1,000 to multiply by multiples of 10, 100 and 1,000. $8 \times 100 = 800$ $8 \times 300 = 800 \times 3$ $= 2,400$ $2.5 \times 10 = 25$ $2.5 \times 20 = 2.5 \times 10 \times 2$ $= 50$
Multiplying decimals	Explore decimal multiplications using place value equipment and in the context of measures. 3 groups of 4 tenths is 12 tenths. 4 groups of 3 tenths is 12 tenths. 1.3 cm 1.3 cm 1.3 cm 1.3 cm	Represent calculations on a place value grid. $3 \times 3 = 9$ $3 \times 0.3 = 0.9$ Understand the link between multiplying decimals and repeated addition.	Use known facts to multiply decimals. $4 \times 3 = 12$ $4 \times 0.3 = 1.2$ $4 \times 0.03 = 0.12$ $20 \times 5 = 100$ $20 \times 0.5 = 10$ $20 \times 0.05 = 1$ Find families of facts from a known multiplication. I know that $18 \times 4 = 72$. This can help me work out:

	$4 \times 1\text{ cm} = 4\text{ cm}$ $4 \times 0.3\text{ cm} = 1.2\text{ cm}$ $4 \times 1.3 = 4 + 1.2 = 5.2\text{ cm}$	<table><tr><td>T</td><td>O</td><td>.</td><td>Tth</td></tr><tr><td></td><td></td><td></td><td>●●●●</td></tr><tr><td></td><td></td><td></td><td>●●●●</td></tr></table> +0.2 +0.2 +0.2 +0.2 0 </	T	O	.
